

Jellyfish

The jellyfish have two major body forms in their life. First is the polyp stage, characterized by a non-moving stalk that catches food that drifts by. The second is the free-swimming form called the medusa stage, characterized by a round body with food catching tentacles hanging down. This is the form most people are familiar with.

1. Jellyfish have _____ body forms in their life.
2. The non-moving stage is the _____ stage.
3. The free-swimming stage is the _____ stage.
4. What stage is the pictured jellyfish in? _____
